STREADY

A Marathon Training Companion

Helping runners stay accountable to an existing training plan when real life gets in the way.

REAL LIFE CAN DISRUPT A TRAINING PLAN

Stready supports tracking and accountability; it does not replace a coach or make decisions for the runner.

THE CHALLENGE

Work, illness, unexpected events, or motivation changes **can interrupt** a runner’s schedule.

THE OPPORTUNITY

Help users **understand progress** and **adapt disrupted sessions** without losing control.

DESIGN QUESTION

How might we help runners **stay accountable** to their **existing plan**?

DESIGN AROUND REAL TRAINING HABITS

Discovery included short interviews with two experienced runners; follow-up conversations explored the product direction.

USER 01

Debut / self-training runners who may need structure, guidance, and accountability.

USER 02

Experienced runners who need flexibility when work or personal commitments interfere.

KEY INSIGHT

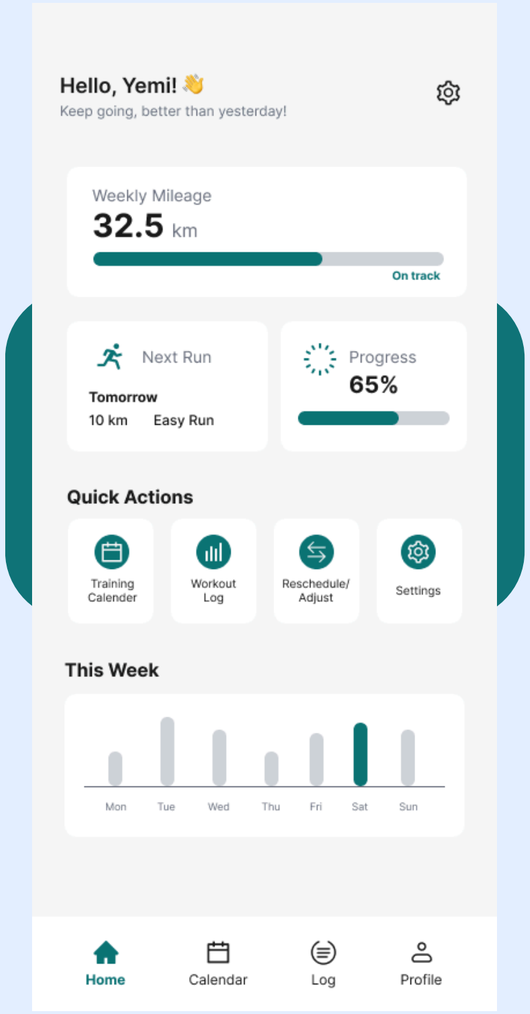

Some runners already have a coach-created plan. **Tracking and accountability** should come first.

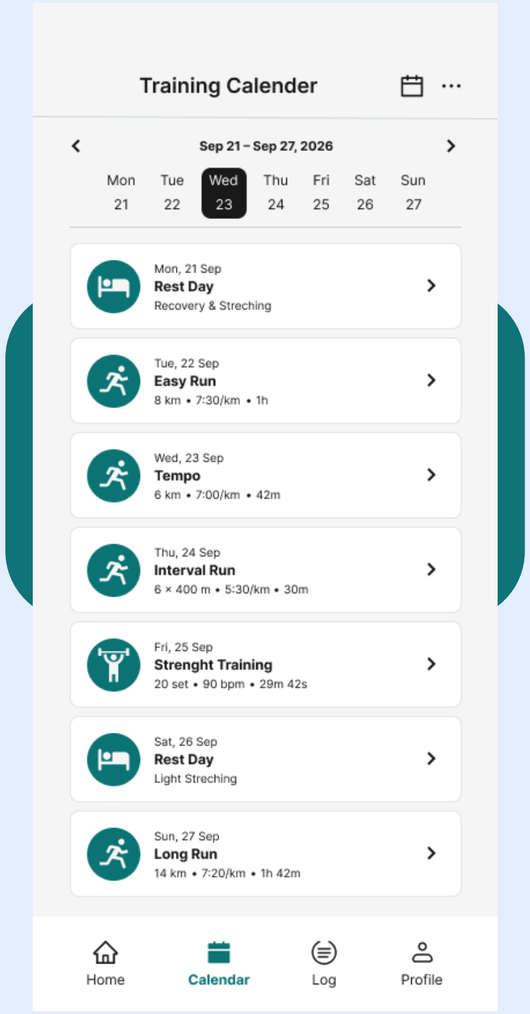

KEEP THE RUNNER IN CONTROL

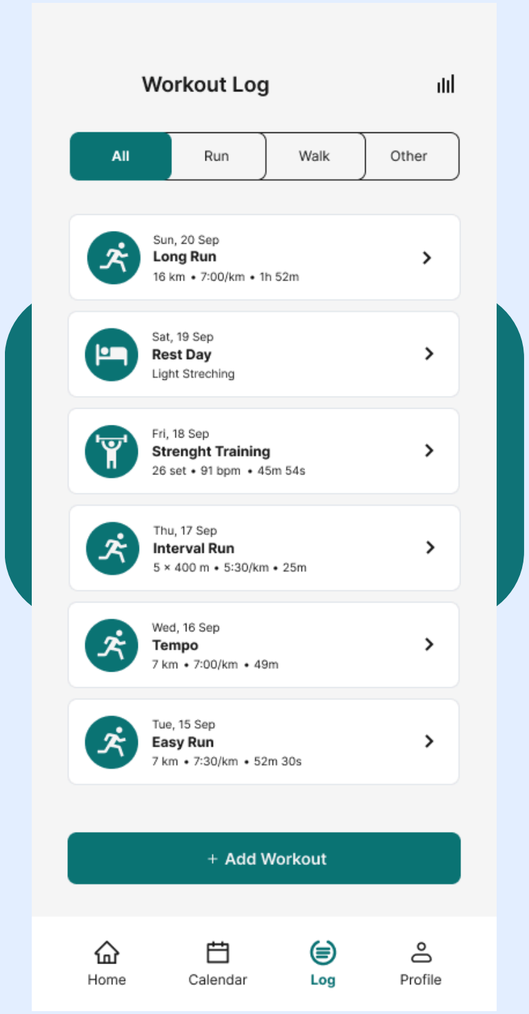

Training-plan suggestions are optional; the core value is supporting a plan the runner already has.

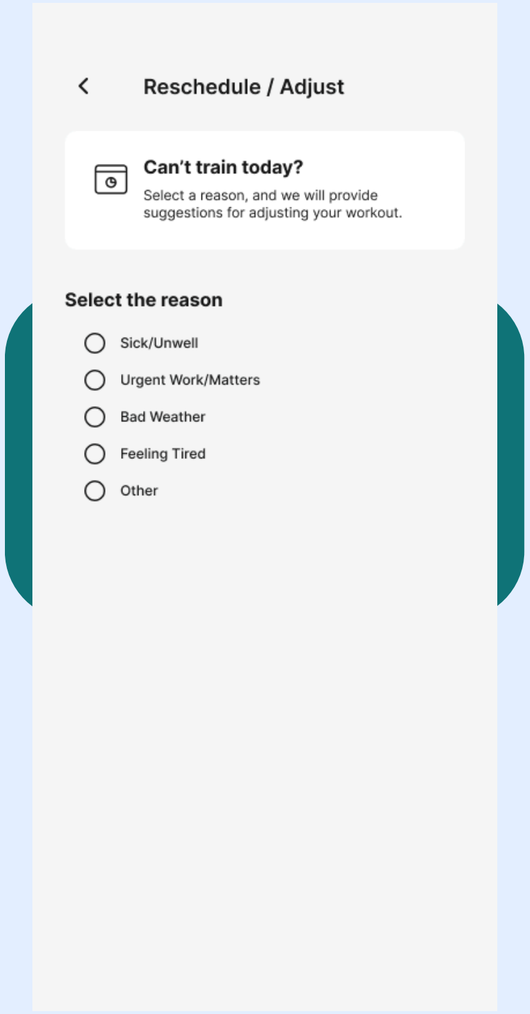

01 Existing plan → **02** Life disruption → **03** Review options → **04** Keep on track

FOUR CORE SCREENS ANCHOR THE PROTOTYPE

REUSABLE FOUNDATIONS FOR A CONSISTENT UI

The design system and component library are reported as complete in Figma.

Notes

How do you feel after the workout?

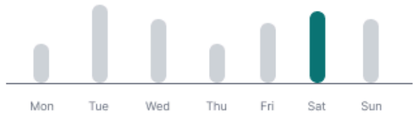

Notes

Everything is good

Home · Calendar · Log · Profile

Sep 21 – Sep 27, 2026

This Week

Sun, 20 Sep
Long Run
16 km • 7:00/km • 1h 52m

Weekly Mileage
32.5 km
On track

Can't train today?
Select a reason, and we will provide suggestions for adjusting your workout.

Adjustment Options
Today's workout can be moved to tomorrow or replaced with 30 minutes of cross training.

View Details · Apply

View Details opens the modal

Adjustment Suggestions

Based on this week's training load, since you selected "Sick / Unwell", today's workout can be replaced with:

Cross Training
30 minutes • Light intensity
- Stationary bike
- Yoga / stretching
- Casual walk

Apply · View Details

THREE TASKS TESTED THE CORE FLOWS

Remote test using screen recording and post-task questions; one participant completed testing.

TASK 01
RESCHEDULE

Difficulty rating: 2/5
Entry point took exploration; manual option affordance was unclear.

TASK 02
LOG WORKOUT

Difficulty rating: 4/5
Participant reached Workout Log but did not continue to Add Workout.

TASK 03
PROGRESS

Difficulty rating: 5/5
Weekly progress was easy to find and understand.

Sample size: n = 1. Treat these as initial insights, not generalizable findings.

THE NEXT ACTION NEEDS TO BE UNMISTAKABLE

The participant also liked Training Calendar and suggested a manual route map as a future feature.

KEEP

Weekly progress was easy to find and understand.

IMPROVE

Make Reschedule / Adjust entry points and “Reschedule Manually” more discoverable.

IMPROVE

Make “Add Workout” clearer so users know how to continue.

A USEFUL FIRST TEST, NOT FINAL VALIDATION

The initial target was 2–3 testers; only one participant completed the test.

WHAT WE KNOW

One participant found weekly progress clear and identified friction in rescheduling and workout logging.

WHAT'S NEXT

Test revised flows with more runners; validate whether changes improve discoverability and task completion.

CONCLUSION

Design for the next step:

A page can be easy to reach while the action inside it remains unclear.
